

ASIAN CITRUS PSYLLID QUARANTINE PROJECT

Approved Treatment Protocol for Intra Quarantine Movement of Regulated Articles of Nursery Stock

Regulated nursery stock must be treated ***UNDER REGULATORY SUPERVISION*** with both a systemic (table 1) and foliar (table 2) pesticide in order to move within the area quarantined for Asian citrus psyllid (ACP). Tables 1 and 2 below, list examples of products approved by the California Department of Food and Agriculture as quarantine treatments for the Asian Citrus Psyllid State Interior Quarantine (CCR 3435).

It is incumbent upon the user to follow all label directions when using any of the products listed below for quarantine certification purposes.

Using one of the systemic product examples below, following soil application method at maximum label rate listed for psyllids (if psyllid is not listed, contact Project), allows movement of regulated nursery stock within the area quarantined for ACP for the specified certification period.
